PUBLIC SUFFIX LIST

[LEARN MORE](#) | [THE LIST](#) | [SUBMIT AMENDMENTS](#)

LEARN MORE ABOUT THE PUBLIC SUFFIX LIST

The Public Suffix List is a cross-vendor initiative to provide an accurate list of domain name suffixes, maintained by the hard work of Mozilla and by submissions from registries, to whom we are very grateful.

The usefulness of this can be seen if we take the example of cookies. In the past, browsers used an algorithm which only denied setting wide cookies for top-level domains with no dots (e.g. `com` or `org`). However, this did not work for top-level domains where only third-level registrations were allowed (e.g. `co.uk`). In these cases, websites could set a cookie for `.co.uk` which would be passed onto every website registered under `co.uk`.

Since there was and remains no algorithmic method of finding the highest level at which a domain may be registered for a particular top-level domain (the policies differ with each registry), the only method is to create a list. This is the aim of the Public Suffix List.

Software using the Public Suffix List will be able to determine where cookies may and may not be set, protecting the user from being tracked across domains.

As well as this, the Public Suffix List can also be used to support features such as site grouping in browsers. By knowing where the user-content section of the domain name begins and ends, browsers can group cookies and history entries by site in a way that couldn't easily be done before.

Uses

These are some of the uses of the list we know about. If you are using it for something else, you are encouraged to tell us, because it helps us understand the potential impact of changes.

- D. Direct efforts**, lead by staff, with the participation from the community, **for further studies** to investigate the scope of the issue and **what other services or actions could be taken by ICANN** to support the Universal Acceptance of IDN TLDs beyond outreach and awareness campaigns
